

Cloud-Based Speech Recognition

OPTIMIZES RADIOLOGY WORKFLOW

“SayIt has met – and even exceeded – my expectations as an experienced speech recognition user.

With SayIt, we can scale our business while improving quality and timeliness of reporting.”

Dr. David Cohen, Founder and Chief Medical Officer, Teleradiology Specialist

The **SayIt** speech recognition solution offers providers a scalable cloud-based solution for diagnostic reporting anywhere.

WHAT YOU REALLY WANT FROM YOUR SPEECH RECOGNITION SOLUTION

High accuracy.

A solution that follows you wherever you need to work – one account, one version.

Able to support remote users without spending hours on the phone.

Avoid downtime and effort installing new releases.

No new hardware or network equipment to purchase.

No upfront dollar investment, especially when you have providers coming and going.

Ability to easily build your own templates in addition to standard industry versions.

WHAT YOU'RE PROBABLY GETTING TODAY FROM THE OTHER GUYS

Yes, but at what price?

Multiple versions of the same product that don't talk to each other. A bill for another license when you want to work at home.

Hours spent on the phone because you can't see what's happening on the other end. Trips to remote sites to install new users.

Annual maintenance bills and pressure to move to new versions.

Cloud servers that you get to pay for.

Hefty license fees that aren't transferable. Or, monthly subscriptions requiring a long-term commitment.

????

With SayIt you get a high quality, highly accurate solution that delivers what you really want. At a price that's a fraction of the other guys. What's not to like?
